DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3,7 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over McMillen (3,590,325).

McMillen teaches a undervoltage detection and trip current energy storage device that includes a circuit for sensing an undervoltage condition in a load voltage. The circuit upon sensing the low voltage prevents the circuit breaker from being closed if it is open and opens the circuit breaker if it is closed. The breaker has a voltage sensitive relay 13 and a DC motor 32 as functioning parts of the circuit arrangement.

The device taught by McMillen differs from the claims by not being said to have the motor of an electric winch as a part of the protected load.

It would have been obvious to one of ordinary skill in the art to use the teachings of McMillen to meet the claims, because a motor is part of the McMillen device and no inventive design considerations are needed to use the teachings to protect a winch motor from undervoltage.

Allowable Subject Matter

Claims 4-6,8,9 and 11-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the limitations of the above claims go beyond the simple connection of the undervoltage relay to an electric motor driven winch.
